Low to medium pressure gauges and gaugecocks for direct visual identification of liquid levels.

#### **FEATURES**

- · Reliable easy to understand level reference.
- Gives users the ability to inspect liquid characteristics visually.
- Non-intrusive.
- No electrical power required. Provide accurate direct liquid level measurement in remote locations where power is not available. Not affected by power failures.
- · Provide a near-unlimited length of measure.
- · Plain transparent and redline glass available.
- Wide range of glass protectors provide improved protection.
- Glass unions provide superior pressure and temperature ratings.
- Can be supplied to meet ASME requirements.
- Offset pattern valve bodies to allow for cleaning of the valve.
- Ball check shut-off prevents loss of process fluid in the event of an accidental breakage of the gauge glass.

#### **GENERAL APPLICATION**

Used to register liquid levels in low to medium pressure applications in the petroleum, chemical and general process industries, including steam boiler service.

## **TECHNICAL DATA**

Materials:

Glass High pressure, heavy wall or red line Gaugecocks: Carbon and 316 stainless steel Glass size: 5/8" and ¾" (DN 18 and 20)
Connections: ½" to 1" (DN 15 to 25)

Pressure ratings

Glass: to 600 psi (41.4 bar)

Temperature rating

Glass: to 425°F (218°C)
Gaugecocks: -325°F to 750°F

(-198°C to 399°C)

16633 Foltz Parkway, Strongsville, OH 44149 USA ● Telephone: +440-572-1500 www.PenberthyProcess.com ● sales@PenberthyProcess.com

**GAUGES** 

## **OVERVIEW**

Penberthy tubular glass gauges are mounted to the vessel externally and use tubular glass to provide direct visual verification of the liquid level present. The transparent glass also provides an excellent means to inspect fluid characteristics optically.

Liquid enters the gauge through the lower tank connection. The meniscus present in the glass tube corresponds to the liquid level in the tank.

A wide range of accessories allows you to customize each gauge to your specific application requirements. These options can also provide enhanced level indication and protection for the tubular glass.

#### **Protectors**

Tubular glass is susceptible to accidental breakage. To counteract this condition, a variety of protectors is offered which prevent damage to the glass but do not restrict level indication capability. In some cases, the protector actually enhances it. Protectors can be adapted to fit most major manufacturers' gaugecocks.

Guard rods – Two or four metallic rods placed next to the glass tube.

Plastic – A transparent box surrounding the tubular glass constructed from plastic.

#### **Center Fitting**

Intended for use in gauges over 48" in height, it allows you to join two pieces of glass within the same gauge. This increases the length of the gauge to a max of 144" (with 2 center fittings).

TABLE 1 - PRESSURE/TEMPERATURE RATINGS FOR GAUGES WITH A SINGLE PIECE OF TUBULAR GLASS (BOTH 5" AND 3")

Center to center distance for vessel	No corrosion u	up to 150°F (66°C	) psig (kPa)	Steam boiler service up to 425°F (218°C) psig (kPa)

# OVERVIEW

Penberthy tubular glass gaugecocks are used in low to medium pressure applications. Available in offset and straight patterns, they isolate the tubular glass from the liquid contents of the vessel.

They are available with a combination of features for a range of users, including union vessel connections and a choice of stuffing box sizes for various glass diameters. All stuffing box connections are designed for positive seal with minimum radial compression.

Offset gaugecocks have the advantage of permitting the inside of the tubular glass to be cleaned easily with a minimum of disassembly. By removing the vent and drain plugs (or other connection), a straight passage is opened through the tubular glass. A brush can be inserted through the gaugecock vent and drain for glass cleaning.

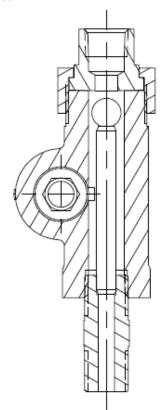

#### Automatic ball check shut-off

To prevent rapid loss of fluid in the event of accidental glass breakage. Penberthy gaugecocks are supplied with automatic ball check shut-off. Should the glass break, the pressure drop causes the ball checks to seat to prevent loss of tank contents. To unseat these ball checks during the liquid level readings, the tip of the gaugecock stem has an extension that pushes the ball away from its seat while allowing the gauge column to fill as liquid contents pass around the ball. Stainless steel retainers prevent reverse seating of balls or loss of balls during installation.

Both upper and lower gaugecocks in each set are equipped with horizontal ball checks. Balls re located on the vessel side of the guagecock seats.

Gaugecocks with ball checks omitted meet ASME boiler requirements. As an alternative method to ASME boiler requirements, the lower gaugecock is available with an optional vertical rising ball check located in the offset portion of the gaugecock body and the upper gaugecock has a leaky seat.

## Vertically Rising Ball Check

SERIES N2/K2 OFFSET PATTERN GAUGECOCKS

## **OVERVIEW**

The N2 and K2 Series include models N2A/K2A, N2B/K2B and N2C/K2C. They are offered in steel or 316 stainless steel materials, in ½" to 1" (DN 15 to 25) sizes, with a 300 P-CL-ANSI rating and a wide range of features in offset pattern design.

## **FEATURES**

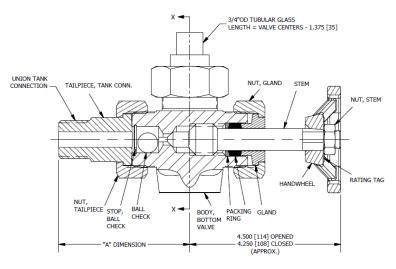

- Offset pattern allows easy cleaning.
- Integral bonnet (N2 series).
- Union bonnet (K2 series).
- Union vessel connection.
- Ball check shut-off prevents loss of process fluid in the event of an accidental breakage of the tubular glass.
- Integral seat (N2 series).
- Threaded renewable seat (K2 series).
- Can be supplied to meet ASME requirements.
- Wide variety of vessel connections available.

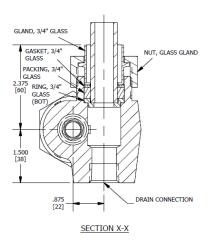

A variety of optional features are available when specified. Optional materials can be specified for the gaugecock body and trim (trim consists of the stem, stem packing retainer, ball check and seat (K2 series only)). Standard and optional materials conform to ASTM specifications.
